1 TO 6

- Our operational GHG emissions are those we can directly influence and will be working on to reduce.
- This is a diagram of our Carbon Footprint, graph data not to scale. Airways has no category 5 emissions.

Airways does not have operational control the number of aircraft in our airspace. Airlines and operators frequently change routes, affecting the volume of aircraft managed by our controllers. Therefore, setting emission targets for air traffic services is impractical. However, Airways captures and reports on these emissions.
